## Overview

This document provides an easy to follow procedure for Mocha Point to install the application our team has built and provided for them. The process is simple and provided step-by-step. We will provide a zipped folder to Mocha Point that can be accessed on the Windows Desktop located in store.

## Installing the Application

### Prerequisites

- Windows 7 (64-bit or later)
- The zipped folder containing all files (received through email) from our team

## Installation Steps

Follow the provided steps below to extract and run the application on the main store computer.

### Step 1: Receiving Zipped Folder

Check the inbox of the email you provided and be sure you have received the zipped folder from our development team.

## **Step 2: Downloading the Zipped Folder**

Once the email is located and opened, download the folder, and select where you would like to download it.

We recommend to have the zipped file somewhere safe and easy to remember.

## **Step 3: Extracting from the Zipped Folder**

Once the zipped folder has finished downloading, navigate to the location where it was saved on your computer. To extract the files, right click on the zipped folder, select “Extract All” from the menu, select a destination, preferably the desktop, and the files will be extracted.

## **Step 4: Launching Executable File**

After the files are finished being extracted, open the folder, and find the .exe file, double-clicking it to launch the application. The user can create a shortcut and place it at their location of choice.

## **Step 5: Running Application**

When the application launches, you will see the password screen and then be able to log into the inventory management system.
