System Requirements

Overview

This System Requirements document is outlining the overall system requirements that will be necessary for the implementation of the system as well as its maintenance. The software will have a locally hosted application that will be installed on their in-house computer. The application can be installed on any desktop or laptop with the following minimum requirements.

Operating System Requirements

The Mocha Point Inventory Management System is compatible with the following operating systems:

- **Windows 7 or later:** The software can be installed and run on Windows 7 or later. We would recommend using the latest version of Windows for the best performance and security.

Hardware Requirements

The Minimum requirements for your system:

Processor: A dual-core processor or higher is recommended for smooth operation.

Memory (RAM): At least 4 GB of RAM is required for efficient performance.

Storage: The software itself has minimal storage requirements, but the necessary storage space depends on the scale of the system, including the volume of products, orders, and historical data. We recommend ensuring ample storage capacity to maintain system efficiency.

Software Requirements

- **Offline Operation:** Since the Mocha Point Inventory Management Software is designed to be an offline application, there are no specific browser requirements. The Desktop will not have to rely on internet connectivity for the functionality.

Additional Considerations

- **Security Software:** Ensure that your system has appropriate security software (antivirus, firewall) to protect your data and the software from security threats.
- **Input Devices:** A standard keyboard and mouse or other input devices suitable for your system are required for data entry and navigation.
